Business Plan

Project: Atphon Travelwear (Patented)

As traveler's personal belongings, Atphon Travelwear will be more convenient and safer to use and carry than existing mobile phones.

CEO of Cxino Semi-Network Technology Inc

Letter to Investors

As long as you stand on the street, everywhere, you can see people wearing jackets, backpacks, and holding mobile phones; our project combines these three "market rigid needs" into one, which can provide people with unlimited convenience and the feeling of carefree, and which also indicates its far-reaching market potential, because it can realize a dream of many people.

Project Recommendations

Hello investors:

This is a sincere invitation from Cxino Semi-network Technology Inc (Canada), and hereby recommends exciting news to you about our projects.

We are developing an Attire Phone system with features of communication, positioning, alarm, data processing, etc., aiming to transform travel-related AI and other high-tech from "Smartphone-held" to "Attire-held", now we sincerely seek financial support, such

as venture capital, entrepreneurial funds, etc., and hope to get your attention and response.

Our project is Atphon Travelwear, which is protected by multiple patents, copyrights and trademark.

Our goal is to turn a travel wear (combination of jacket and backpack) into a popular mobile item, just like today's Smartphone, providing users with safer and more convenient intelligent services.

The Cxino cloud and hubware chips our company developed will provide technical support for this intelligent travelwear, which are dedicated to meet the physical and technical requirements of company's various AI and IoT products.

For details about our project, including technical characteristics, market demand, business model, development strategy, current project stage and future outlook, please refer to our official website cxino.com

As long as you stand on the street, everywhere, you can see people wearing jackets, backpacks, and holding mobile phones; our project combines these three "market rigid needs" into one, which can provide people with unlimited convenience and the feeling of carefree, which also indicates its far-reaching market potential, because it can realize a dream of many people.

In addition, our project originated from a real story, which contains a son's commitment to his parents, and a grandson's commitment to his grandparents, and also contains a belief in the "social responsibility".

 Walterz (main founder) has a doctoral background in computer engineering, with many years of experience in software and hardware development, achieved fruitful academic results, and has a strong sense of business.

Charliez (co-founder) has a MBA background, with many years of business experience.

So they each have their strengths, can learn from each other's strengths, and can work closely together.

We would be proud and grateful if you would appreciate our projects, join our project, and work hand in hand with us to create a brilliant future; we firmly believe that many travelers eagerly await our refreshing intelligent and fashionable products, which will also become a common glory for all project participants.

Our company is working hard to make breakthrough progress in our project as soon as possible, to meet the needs of travelers who need artificial intelligence services, so we urgently need more resources, especially operating funds.

I have full confidence that after you view the information of our project from our official website, you will be excited like me, because this project really can bring IT career a new prospect, may also lead to a new market trend.

I hope our project can attract your attention, hope to hear your affirmative response, hope to explain our project in person to you one day, and hope to get your strong support.
